Professional Summary

Java Backend Developer (B.E. CSE, 2026) experienced in building secure, layered REST APIs with Java, Spring Boot, Spring Security (JWT), Spring Data JPA, Hibernate, MySQL and PostgreSQL. Completed a backend internship building a banking application and tested 20+ API scenarios with Postman. Solid foundation in Data Structures & Algorithms, OOP, multithreading and SQL, with daily LeetCode practice in Java. Familiar with Docker and microservices concepts, and presented a Spring Boot-based multi-agent LLM research paper at NCETECM 2026.

Technical Skills

Languages & Core Java: Java, SQL, HTML, CSS; OOP (polymorphism, abstraction, interfaces), Exception Handling, Multithreading & Synchronization, Collections (HashMap, ArrayList, PriorityQueue), JDBC
Backend Frameworks: Spring Boot, Spring Security (JWT), Spring Data JPA, Hibernate, Lombok
API & Architecture: RESTful API design, Layered Architecture (Controller–Service–Repository), DTOs & Mappers, Authentication & Authorization
Databases: MySQL, PostgreSQL, MySQL Workbench
Tools & DevOps: Git, GitHub, Postman, Docker, Spring Initializr, VS Code
Also: DSA (daily LeetCode in Java); familiar with Microservices (Eureka, API Gateway, Feign Client, Kafka), React, Generative AI, LLMs, RAG

Work Experience

REPUNEXT LLP | **Internship** **Jul 2025 - Aug 2025**
Backend Developer Intern *Chennai*

- Built a secure banking backend in Java and Spring Boot with **5+ REST APIs**, following a layered Controller–Service–Repository architecture.
- Implemented JWT authentication with Spring Security, securing **100%** of protected APIs.
- Developed **4 core banking features**: account creation, deposit, withdrawal and fund transfer, with business-rule validation on each operation.
- Designed RESTful endpoints using standard HTTP methods and status codes, with JSON request/response handling.
- Integrated Spring Data JPA and Hibernate with MySQL, mapping entities and relationships for reliable persistence.
- Added exception handling and input validation to return clear error responses for invalid requests.
- Tested **20+ API scenarios** with Postman, covering success, failure and unauthorized-access cases.
- Used Git and GitHub for version control and collaborated on code with the team.

Projects

Employee Management System | *Java, Spring Boot, Spring Data JPA, MySQL, React*

- Developed a full-stack application with **5+ REST API** endpoints supporting full CRUD operations: add, view, list, update and delete employee records.
- Structured the backend in Controller–Service–Repository layers, separating request handling, business logic and data access.
- Used DTOs and mappers to decouple API responses from database entities, and Lombok annotations to reduce boilerplate code.
- Used Spring Data JPA with MySQL for efficient database operations and persistent data management.
- Returned appropriate HTTP status codes and JSON responses from the REST controllers.
- Built a responsive React UI with **3+ views** for listing, adding and updating employees, integrated with the REST APIs.
- Published the project to GitHub as a monorepo with separate backend and frontend modules.

Multi-Agent Cybersecurity System Using LLMs | *Java, Spring Boot, JPA, LLMs, REST APIs*

- Designed a **multi-agent architecture** that uses LLMs to detect and respond to cybersecurity threats, with each agent handling a specific task.
- Architected RESTful APIs in Spring Boot enabling asynchronous, real-time communication between autonomous AI agents.
- Designed and managed database entities using Spring Data JPA and Hibernate to simplify database operations and ensure efficient data persistence.
- Followed a layered backend design so agent logic, API endpoints and persistence stay modular and easy to extend.
- Applied cybersecurity concepts to threat detection and automated response workflows driven by LLM analysis.
- Presented the work as a research paper at **NCETECM 2026**, a national-level conference.

Education & Certifications

Sri Balaji Chockalingam Engineering College | **Arni** **2022 - 2026**
B.E. Computer Science and Engineering *CGPA : 7.5*

- **Programming in Java** – NPTEL (Score: 87%)
- **Introduction to SQL** – Simplilearn
- **AI Fluency: Framework & Foundations** – Anthropic

Achievements

- Presented a research paper on **Multi-Agent Cybersecurity Systems** using LLMs at NCETECM 2026, a national-level conference.
- Consistently solved and submitted **Data Structures and Algorithms (DSA)** problems daily on **LeetCode** in Java to strengthen problem-solving skills.
- Completed **NPTEL Java Programming** certification with a score of **87%**.
